

Contract Software Engineer

AWS / .NET Modernization • Mid & Senior Level • Hybrid / Remote (Mountain Time ±2 hrs)

JOB BRIEF

C# / .NET • AWS • Containerized Services • Greenfield Modernization

Presented by Blue Hive Consulting

About the Opportunity

Our client, a well-established Utah-based company with a nationwide distribution network, is modernizing the fulfillment systems its distribution centers run on every day. Some of these systems are up to 30 years old, and the engineering team is rebuilding them as a greenfield, containerized platform on AWS, reusing patterns from a modern .NET 10 platform the company built within the last two years. You'll join as a contract engineer embedded with the internal teams, writing production code from the start, helping shape a clean new system, and sharing your AWS and testing know-how with engineers along the way. This is a hands-on engineering role for people who like building quality systems that last.

AT A GLANCE

Role	Contract Software Engineer — AWS / .NET Modernization
Engagement Type	Contract
Level	Mid-level and senior engineers; self-directed engineers especially welcome
Industry	Retail e-commerce and distribution (fulfillment and warehouse systems)
Work Model	Hybrid / remote. Must be within 1–2 hours of Mountain Time; occasional in-office time in Utah is a plus but not required
Start / Duration	As soon as possible; supports a multi-year modernization roadmap with key milestones over the next 6–12 months
Team Rhythm	Daily stand-ups; Kanban with continuous releases (daily, sometimes several a day)
Core Stack	C# / .NET 10, AWS (ECS Fargate, DynamoDB, ECR, S3, IAM, Secrets Manager), SQL Server, Kafka, Temporal, Angular
AI Tooling	Cursor and Claude provided and used daily
Equipment	Company laptop shipped to you, pre-configured for access

Client name and additional details are shared during your recruiter conversation. **Presented exclusively by Blue Hive Consulting • Reach out to your recruiter to learn more.**

Interview Process

A single panel interview with engineering leadership and development managers

CORE COMPETENCIES

C# / .NET 10	.NET Framework Migration	AWS ECS Fargate	Containerization (ECR)
DynamoDB & SQL Server	S3 · IAM · Secrets Manager	Kafka Event Streaming	Temporal Orchestration
Integration & Unit Testing	Desktop-to-Web Modernization	Angular	AI-Assisted Dev (Cursor / Claude)
Pair Programming & Mentoring	Kanban / Continuous Delivery	Maintainable, Flexible Code	WMS / Supply Chain (Plus)

THE ROLE

► What You'll Do

- Rebuild core fulfillment services as containerized applications on AWS, starting with the most business-critical systems
- Upgrade legacy .NET Framework code to modern .NET and help replace desktop applications with web apps
- Write unit and integration tests for the services you build, working alongside quality engineers who own end-to-end workflow testing
- Migrate live workloads from legacy systems to the new platform — the distribution centers depend on these systems every day
- Build clean, maintainable code that lets the business change how it fulfills orders without major rework
- Ship through daily releases, review pull requests, and contribute to design discussions with the client's architect and engineering managers

► The Technical Environment

- **Legacy fulfillment platform:** C# from .NET Framework 4.6.1 through .NET 10, SQL Server, WinForms desktop apps, on-prem web services, an early AWS footprint, Angular, and Kafka
- **Modern fulfillment platform:** built within the last two years on C# .NET 10 and AWS (ECS Fargate, DynamoDB, ECR, S3, IAM, Secrets Manager), with Temporal orchestration, Kafka, and a test-driven culture
- Greenfield target: containerized AWS services that reuse the modern platform's proven patterns

► How You'll Work

- Embedded with internal engineering teams and part of the day-to-day discussion, not working in a silo
- Sharing AWS and containerization patterns with engineers who are newer to them through pairing, code reviews, and everyday collaboration
- Strong core-hours overlap for planning, stand-ups, and handoffs on a distributed team
- Direct, candid communication from leadership — and the same expected in return

► AI-Forward Engineering

- Cursor and Claude are approved and used daily, and teams maintain their own AI skills and rules
- The company is investing heavily in AI and recently brought on a principal AI engineer to build AI into the full delivery pipeline
- Engineers who already plan with AI, delegate work to agents, and review the results critically will stand out and help set the direction for the team

WHAT YOU BRING

Required

- ✓ Mid- to senior-level software engineering experience in C# / .NET
- ✓ Hands-on experience migrating .NET Framework applications to modern .NET
- ✓ Production AWS experience with containerized services — ECS Fargate, ECR, DynamoDB, S3, IAM, Secrets Manager
- ✓ Writing unit and integration tests as a normal part of your development work
- ✓ Ability to ramp up quickly, work independently, and collaborate closely with a team
- ✓ Willingness to teach, pair, and share knowledge with other engineers
- ✓ Located within 1–2 hours of Mountain Time

Nice to Have

- + WMS, supply chain, logistics, or distribution center systems experience
- + Advanced AI-assisted development with Cursor and/or Claude, including agents and sub-agents
- + Experience with Kafka, Temporal, Angular, or desktop-to-web modernization
- + Based in Utah and able to come into the office occasionally

WHY ENGINEERS LIKE THIS ROLE

- ✓ **Greenfield build** — help design and deliver a clean, modern platform rather than patching old code
- ✓ **Modern stack** — .NET 10, containerized AWS services, Kafka, and Temporal
- ✓ **Real impact** — the systems you build will run nationwide distribution operations every day
- ✓ **AI-forward team** — approved tools, company investment, and room to lead by example
- ✓ **Flexible work** — hybrid / remote with a collaborative, direct, low-ego leadership team
- ✓ **Fast, simple process** — one panel interview and quick feedback at every step

NEXT STEPS

- 1 Reply to your Blue Hive recruiter with your updated resume, current location, and availability
- 2 Meet with our team so we can get to know your background and goals — every candidate we submit is someone we've spoken with directly
